

```
import java.net.*;

public class UDPCClient {
    public static void main(String[] args) {
        try {
            DatagramSocket clientSocket = new DatagramSocket();

            String message = "Hello from UDP Client!";
            byte[] sendData = message.getBytes();

            InetAddress serverAddress = InetAddress.getByName("localhost");

            DatagramPacket sendPacket = new DatagramPacket(sendData,
sendData.length,
serverAddress, 9876);
            clientSocket.send(sendPacket);

            byte[] receiveData = new byte[1024];
            DatagramPacket receivePacket = new DatagramPacket(receiveData,
receiveData.length);
            clientSocket.receive(receivePacket);

            String reply = new String(receivePacket.getData()).trim();
            System.out.println("Server says: " + reply);

            clientSocket.close();
        }
        catch (Exception e) {
            e.printStackTrace();
        }
    }
}
```
